Phone 510-593-8114   aaronbear@gmail.com   Github   Linkedin

Driven adventurer, Javascript developer, Full-Stack developer

Skills

Ruby, Ruby on Rails, JavaScript, jQuery, React.js, Redux, HTML5, CSS3, MongoDB, SQL

Projects

Swyle (Ruby on Rails, React, GraphQL, CSS, HTML5, Redis, Websockets, Apollo, AWS)   Live Site | Github
Websocket-Powered Microblogging Platform

- Allows users to seamlessly change their color scheme
- Create blog posts, upload images, comment on posts
- Implemented live updates using GraphQL subscriptions, Rails Action Cable, and Redis
- Built search using a GraphQL Query component and custom routing with query parameters

Hedronite Attack (Vanilla JavaScript, Canvas)   Live Site | Github
A fast-paced action game written in JavaScript
- Collision detection logic
- Awesome graphics and sound effects with changing images based on object state.
- Dynamically instantiated random moving objects
- Performed voice acting and story writing

Fliquor (Rails, React, Redux, CSS)   Live Site | Github
Flickr clone
- Custom user authorization with a streamlined login experience.
- Constructed protected routes to prevent unauthorized users from posting.
- Built numerous custom styled React components

Library of Legends (MongoDB, Express, React, Node, GraphQL, CSS, Apollo)   Live Site | Github
CRUD app for Pathfinder 2
- Built a character creation menu for Pathfinder 2nd Edition

Experience
